The method provides improved reverse transcription efficiency at lower enzyme concentrations relative to previous high temperature reverse transcription methods, and provide a wider range of usable salt concentrations. The use of the mutant DNA polymerase provides faster reverse transcription extension rates, and consequently less time is needed for the reaction. This motif is derived from DNA polymerases from Thermus species flavus, sps17 and filiformis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        native forms of motifs derived from DNA polymerases used in the method of the invention. The method for reverse transcribing an RNA, comprises treating a transverse transcription reaction mixture which comprises the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          polymerase. These motifs represent a conserved region which affects the DNA polymerase's ability to incorporate dideoxynucleotides labelled with fluorescein and cyanine family dyes. The method of the invention is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Reverse transcribing an RNA, comprises performing a reverse transcriptase polymerase chain reaction amplification of a mixture using a mutant thermoactive DNA polymerase

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Qy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Best Local Similarity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              native forms of motifs derived from DNA polymerases used in the method of the invention. The method for reverse transcribing an RNA, comprises treating a transverse transcription reaction mixture which comprises the RNA, a primer, a divalent cation, and a mutant thermoactive DNA
                                                                                                                                                                                Reverse transcribing an RNA, comprises performing a reverse transcriptase polymerase chain reaction amplification of a rusing a mutant thermoactive DNA polymerase \, -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  concentrations relative to previous high Lemperature reverse transcription methods, and provide a wider range of usable salt concentrations. The use of the mutant DNA polymerase provides faster
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               DNA polymerase's ability to incorporate dideoxynucleotides labelled with fluorescein and cyanine family dyes. The method of the invention is useful in reverse transcription/amplification reactions. The method provides improved reverse transcription efficiency at lower enzyme
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The sequences given in AAB47791-97 and AAM48259-AAM48270 repartive forms of motifs derived from DNA polymerases used in
                                                                                                                                                                                                                                                      WPI; 2002-076891/11.

The sequences given in AAB47791-97 and AAM48259-AAM48270 represent the native forms of motifs derived from DNA polymerases used in the method of the invention. The method for reverse transcribing an RNA, comprises

DNA polymerase's ability to incorporate dideoxynucleotides labelled fluorescein and cyanine family dyes. The method of the invention is useful in reverse transcription/amplification reactions. The method

polymerase. These motifs represent a conserved region which affects the RNA, a primer, a divalent cation, and a mutant thermoactive DNA treating a transverse transcription reaction mixture which comprises the

                                                                   useful in reverse transcription/amplification reactions. The method provides improved reverse transcription efficiency at lower enzyme concentrations relative to previous high temperature reverse transcription methods, and provide a wider range of usable salt concentrations. The use of the mutant DNA polymerase provides faster
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          transcription methods, and provide a wider range of usable salt concentrations. The use of the mutant DNA polymerase provides faster reverse transcription extension rates, and consequently less time is
                                    needed for the reaction.
                                                                                                                                                           RNA, a primer, a divalent cation, and a mutant thermoactive DNA polymerase. These motifs represent a conserved region which affects the DNA polymerase's ability to incorporate dideoxygucleotides labelled with fluorescein and cyanine family dyes. The method of the invention is
                                                                                                                                                                                                                                  of the invention. The method for reverse transcribing an RNA, comprises treating a transverse transcription reaction mixture which comprises the
                                                                                                                                                                                                                                                                     The sequences given in AAB47791-97 and AAM48259-AAM48270 represent the native forms of motifs derived from DNA polymerases used in the method
                                                                                                                                                                                                                                                                                                                                                           Reverse transcribing an RNA, comprises performing a reverse transcriptase polymerase chain reaction amplification of a mixture using a mutant thermoactive DNA polymerase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 18-APR-2000; 2000US-198336P.

                                                                                          The sequence is that of a mutant of Thermus species sps17 polymerase mutant MET-ALA 288 Tsps17, having a different amt. of 5'-3' exonuclease activity than the native enzyme. Thermostable DNA polymerases are useful in many recombinant DNA techniques, esp. nucleic acid amplification by PCR, self-sustained sequence replication (SSR) and high temp. DNA sequencing. The absence of 5'-3' nuclease activity may be desirable in enzymes used in 5'-3' exonuclease activity may be desirable in enzymes used in homogeneous assays for the amplification and detection of a larget

                                                                                                                                                                                                                                                                                                                                                      and high temp. DNA sequencing. The absence of 5'-3' nuclease activity may facilitate higher sensitivity allelic discrimination in a combined polymerase ligase chain reaction (PLCR) assay. An enhanced amt. of 5'-3' exonuclease activity may be desirable in enzymes used in homogeneous assays for the amplification and detection of a target nucleic acid sequence. Mutation of the DNA encoding particular regions of the enzymes can be used to prepare a range of recombinant proteins having 5'-3' exonuclease activity to a complete lack of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The sequence is that of a mutant of Thermus species sps17 polymerase mutant MET-THR 200 Tsps17, having a different amt. of 5'-3' exonucleas activity than the native enzyme. Thermostable DNA polymerases are useful in many recombinant DNA techniques, esp. nucleic acid amplification by PCR, self-sustained sequence replication (SSR) and high temp. DNA sequencing. The absence of 5'-3' nuclease activity
                                                                                                                                                                                                                                           Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Claim 11; Page 59; 185pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          in e.g. PCR, sequencing and detection assays
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Thermostable DNA polymerases with altered 5'-3' exo nuclease activity - having conserved regions mutated or deleted, for use
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    N-PSDB; AAQ24009
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Thermus species SPS17
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    5'-3'; exonuclease; PCR; amplification; SSR; sequencing; PLCR.

                                                                                                                                                                                                                                         may facilitate higher sensitivity allelic discrimination in a combined polymerase figase chain reaction (PLCR) assay. An enhanced ant. of 5'-3' exonuclease activity may be desirable in enzymes used in homogeneous assays for the amplification and detection of a target nucleic acid sequence. Mutation of the DNA encoding particular regions of the enzymes can be used to prepare a range of recombinant proteins having 5'-3' exonuclease activity to a complete lack of
                                                                                                                                                                                                                                                                                                                                                                                            The sequence is that of a mutant of Thermus species sps17 polymerase mutant MET-LNU 152 Tsps17, having a different amt. of 5'-3' exonuclease activity than the native enzyme. Thermostable DNA polymerases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Thermostable DNA polymerases with altered 5'-3' exo nuclease activity - having conserved regions mutated or deleted, for use in e.g. PCR, sequencing and detection assays
                                                                                                                                                                                                                                                                                                                                                  amplitication by M'R, self sustained sequence replication (SSR) and high temp. UNA sequencing. The absence of 5'-3' nuclease activity
                                                                                                                                                                                                                                                                                                                                                                               activity than the native enzyme. Thermostable DNA are useful in many recombinant DNA techniques, esp.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               N-PSDB; AAQ24008

The sequence is that of a mutant of Thermus species sps17 polymerase mutant MET-ALA 74 Tsps17, having a different amt. of 5'-3' exonuclease activity than the native enzyme. Thermostable DNA polymerases are useful in many recombinant DNA techniques, esp. nucleic acid amplification by PCR, self-sustained sequence replication (SSR) and high temp. DNA sequencing. The absence of 5'-3' nuclease activity and high temp. DNA sequencing. The absence of 5'-3' nuclease activity and fight temp. DNA sequencing. The absence of 5'-3' nuclease activity and fight temp. DNA sequencing. The absence of 5'-3' nuclease activity and properties of the sequence of 5'-3' nuclease activity and properties of the sequence of 5'-3' nuclease activity and properties of 5'-3' nuclease activity and 5'-3' exponence of 5

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    activity than the native enzyme. Thermostable DNA polymerases are useful in many recombinant DNA techniques, esp. nucleic acid amplification by PCR, self-sustained sequence replication (SSR) and high temp. DNA sequencing. The absence of 5'-3' nuclease activity may facilitate higher sensitivity allelic discrimination in a combined polymerase ligase chain reaction (PLCR) assay. An enhanced amt. of 5'-3' exonuclease activity may be desirable in enzymes used in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The sequence is that of a mutant of Thermus species sps17 polymerase mutant MET-PHE 43 Tsps17, having a different amt. of 5'-3' exonuclease activity than the native enzyme. Thermostable DNA polymerases
                                                        Mutant thermostable DNA polymerase enzyme ASP43 Tsps17.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            nucleic acid sequence. Mulation of the DNA encoding particular regions of the enzymes can be used to prepare a range of recombinant proteins having 5'-3' exonuclease activity to a complete lack of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Claim 11; Page 59; 185pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Thermostable DNA polymerases with altered 5'-3' exo nuclease activity - having conserved regions mutated or deleted, for use in e.g. PCR, sequencing and detection assays
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Thermus species SPS17

                                                                                                                                                                                                                                                                                                                                                             Дb
                                                                                                                                                                                                                                                                            Ω
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Matches
                                                                                                                                                                                                                                                                                                                                 Query Match
                                                                                                                                                                                                                                                                                                                   Best Local Similarity
                                                                                                                                                                                                                                                                                                                                                                                                                                                       are useful in many recombinant DNA techniques, esp. nucleic acid amplification by PCR, self-sustained sequence replication (SSR) and high temp. DNA sequencing. The absence of 5'-3' nuclease activity may facilitate higher sensitivity allelic discrimination in a combined polymerase ligase chain reaction (PLCR) assay. An enhanced amt. of 5'-3' exonuclease activity may be desirable in enzymes used in homogeneous assays for the amplification and detection of a target

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Best Local Similarity
                              5' Nuclease(s) derived from thermostable DNA polymerase(s) - have cleavage activity with reduced synthetic ability, used for detection of specific target sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             presence of Mg2+. The enzyme is a versatile DNA-polymerase suitable for use in DNA synthesis from DNA and RNA templates, and for automated JNA sequencing. Both of these reactions are performed in the same buffer. The enzyme has a high salt tolerance and is also suitable for use in cycled fluorescent

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The DNA and amino acid sequences of T. flavus AT-62 thermostable DNA-polymerase (DNAP) are given in AAQ80750 and AAR64273, respectively. 5' Nucleases, such as those given in AAQ80742-45, derived from thermostable DNAPs show reduced synthetic activity whilst retaining structure-specific cleavage activity.
for the detection of non-target cleavage products via the formation of a complete and activated protein binding region, and methods for the detection of nucleic acid from various viruses (e.g. human cytomegalovirus) in a sample. The method amplifies the detection molecule rather than the target itself, is less subject to contamination than exponential amplification processes, and allows many targets to be analysed in a single reaction.
                                                                                                                           AAV65783-86). Cleavage of the cleavage structure by the nuclease indicates the presence of specific nucleic acid sequences or specific variants. The invention further relates to methods for the separation of nucleic acid molecules based on charge, methods the separation of nucleic acid molecules based on charge, methods
                                                                                                                                                                                                    preferably using a thermostable structure-specific nuclease such as a modified Thermus DNAP that has reduced synthetic activity (see
                                                                                                                                                                                                                                         methods for forming a nucleic acid cleavage structure on a target sequence and cleaving this structure in a site-specific manner,
                                                                                                                                                                                                                                                                          and variations in nucleic acid sequences.
                                                                                                                                                                                                                                                                                                            This is the amino acid sequence of the thermostable DNA polymerase (DNAP) of Thermus flavus (Tfl). The invention relates to means
                                                                                                                                                                                                                                                                                                                                                                                                       cytomegalovirus DNA
                                                                                                                                                                                                                                                                                                                                                                                                                      Detecting target nucleic acid by sequence-specific cleavage of complex with two specific oligonucleotides - used to detect

                                     sequences, via a cleavage-based procedure, but without the need for amplification of target sequences. Thermostable polymerases, altered to have nuclease, but not polymerase activity are preferably used due to their specificity. The cleavage product specifically formed is detected, preferably by the use of radioactively labelled oligonucleotides. These
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence
                                                                                                                                                describes a method for detecting the presence of a nucleic acid molecule. The method uses a thermostable 5' nuclease derived from thermostable polymerase modified to have reduced synthetic activity where the 5' nuclease is capable of cleaving a linear nucleic acid
                                                                                                                                                                                                                                                                                                       Detection of target nucleic acid molecules - uses modified thermostable enzymes with specific cleavage activity to create specific detection products from oligo:nucleotide(s) and target
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Thermostable DNA polymerase; nucleic acid detection; thermostable 5' nuclease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               AAW80428 standard; Protein; 831 AA
                                                                                                                                                                                                             The present sequence represents a thermostable DNA polymerase enzyme. The sequence is used in the course of the invention. The specification

                                                                                                                                                                                                                                                                                                                                                                                                                                  This sequence is the thermostable polymerase of Thermus species \operatorname{sps17}. The Gly residue at position 43 may be substituted for an Asp residue. This substitution is shown to result in a 100 lold decrease in the 5'-3' exonuclease activity with no change to the polymerase activity of the enzyme.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Disclosure; Columns 7-12; 26pp; English.
